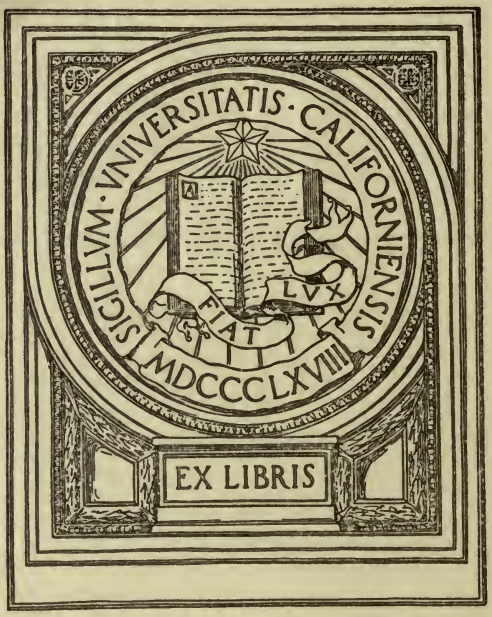
FIVE-PLACE LOGARITHMIC AND TRIGONOMETRIC TABLES

TAYLOR

YC 22432

CHAUNCEY WETMORE WELLS

1872-1933



This book belonged to Chauncey Wetmore Wells. He taught in Yale College, of which he was a graduate, from 1897 to 1901, and from 1901 to 1933 at this University.

Chauncey Wells was, essentially, a scholar. The range of his reading was wide, the breadth of his literary sympathy as uncommon as the breadth of his human sympathy. He was less concerned with the collection of facts than with meditation upon their significance. His distinctive power lay in his ability to give to his students a subtle perception of the inner implications of form, of manners, of taste, of the really disciplined and discriminating mind. And this perception appeared not only in his thinking and teaching but also in all his relations with books and with men.

FIVE-PLACE LOGARITHMIC AND TRIGONOMETRIC TABLES

PREFACE

The editor's aim in these tables has been to secure an open and attractive page, an arrangement easily understood but not involving needless repetitions, and some simple device by which any required data in the table can be quickly found. By lessening the time and weariness involved in using logarithmic tables, it is hoped that logarithmic computation will be encouraged and made more attractive to the beginner.

These tables are intended primarily for those who use logarithmic and trigonometric tables for the first time. The editor believes that clearness of comprehension of the tables by beginners is promoted by retaining the decimal point before mantissas and by tabulating the exact characteristics of the trigonometric functions. In § 6, simple rules are given for the characteristics of the logarithmic functions of angles between 6° and 84°. The computer should apply these fundamental rules so that when the given angle is between these limits he will seek only the mantissas of its functions in the table, and will know at once the relation of an angle to 45° from the characteristic of its logarithmic tangent or cotangent. Moreover, these rules are useful as simple checks.

In Tables III and IV characteristics are written only at the top and the bottom of each column of mantissas. Even these are superfluous when the angle is between 6° and 84°. In Tables I, III, and IV the first two figures of a mantissa are written only in the first mantissa having these figures and in the first mantissa of each group of five mantissas. This plan makes the printed figures stand out clear and distinct in an open page, greatly aids the eye in following either rows or columns, and practically reduces groups of five mantissas to groups of four. In using such tables the student is not fatigued through the strain and confusion incident to consulting pages crowded with needlessly repeated figures.

To enable the computer to find at once the page or the part of a page on which any given datum is tabulated, each table is provided with a system of tabs. The explanation of these tabs in §§ 10–13 will contribute to the better understanding of the tables themselves, and their use will lead the student to a method in his work and enable him to find any desired data in the tables in less than half the time usually required.

CONTENTS

EXPLANATION OF TABLES

Table I

1. Table I contains five-place mantissas of the common logarithms of all entire numbers from 1 to 11,000. Mantissas can be expressed only approximately, and in a five-place table all the figures which follow the fifth are rejected, the fifth being increased by 1 whenever the sixth figure is 5 or more.

When, after the fifth figure has been increased, the last *significant* figure in a mantissa is 5, it is printed with a bar under it. Hence in the fifth place $\underline{5}$ indicates that the fifth figure was 4 and the sixth 5 or more; in the fourth place $\underline{5}$ indicates that the fourth figure was 4, the fifth 9, and the sixth 5 or more; and so on.

When their place is blank the first two figures of any mantissa are the two figures *first above* the blank space.

Note. For brevity in the following pages we shall call the *decimal part of the logarithm* of a number the *mantissa* of the number, and the *integral part of the logarithm* the *characteristic* of the number.

2. *To find from the table the mantissa of any whole number.*

We have the two following cases.

(*a*) When the given number is less than 11,000, that is, when the number is in the table.

E.g., let the number be 7423. On page 14, in the column headed "N," we find the first three figures, 742; passing along this *line* or *row* to the *column* with the fourth figure, 3, at its top, we find .87058, which is the mantissa of 7423.

Thus the first three figures of a number of four figures give the *row*, and the fourth figure gives the *column* in which the mantissa is found.

When the number is one of less than four figures, by adding one or more ciphers we obtain a number of four figures whose mantissa is the same as that of the given number.

E.g., the mantissa of 59 = the mantissa of 5900 = .77085.

To save time in finding the mantissa of a number of one or two figures, the mantissa of each whole number from 1 to 100 is given on page 1 in the column headed "M," at the right of the number itself in the column headed "N."

Ex. 1. Find log 8300 and log 0.00083.

The characteristic of 8300 is $+3$, and that of 0.00083 is -4, or $6 - 10$.
The mantissa of 8300 or 0.00083 is the same as the mantissa of 83.
The mantissa of 83 = .91908.
Hence $\log 8300 = 3.91908$,
and $\log 0.00083 = \bar{4}.91908$, or $6.91908 - 10$.

If the number lies between 10,000 and 11,000, its mantissa will be found on page 20 or 21. Here the first *four* figures of the number give the *row*, and the *fifth* figure gives the *column* in which the mantissa is found.

E.g., the mantissa of 10315 = .01347.

Note. For the explanation of the marginal tabs of Table I see § 10.

Ex. 2. Verify each of the following identities:

$\log 4354 = 3.63889$; $\log 62.81 = 1.79803$; $\log 37.96 = 1.57933$;
$\log 945.8 = 2.97580$; $\log 0.749 = \bar{1}.87448$; $\log 10.327 = 1.01397$.

(*b*) When the given number is greater than 11,000, that is, when the number is not in the table.

In this case we assume that *any small increase in a number is proportional to the corresponding increase in its mantissa.*

This assumption, though not mathematically exact, is sufficiently correct for *interpolation* within narrow limits.

E.g., let the number be 54376.
The mantissa of 54376 = the mantissa of 5437.6.
For convenience we put, or conceive, a decimal point after the fourth figure.

The mantissa of 5438 = .73544
The mantissa of 5437 = .73536
Hence the *tabular difference* = .00008

That is, for an increase of 1 in the number 5437 there is an increase in the mantissa of 8 hundred-thousandths, or 8 points, as we may say for brevity. Hence for an increase of .6 in the number there will be an increase in the mantissa of .6 of 8 points, or 5 points nearly.
Hence the mantissa of 5437.6 = .73536 + .00005 = .73541.
Therefore the mantissa of 54376 = .73541.

Ex. 3. Find log 27.583.

The characteristic is 1, and the mantissa is that of 2758.3.

The mantissa of 2758 = .44059
The increase for .3 = .3 of 16 points = 5
$\therefore \log 27.583 = 1.44064$

The increase for .3 is often called the *correction* for .3.

By aid of the marginal difference table this computation can easily be made mentally. *E.g.*, the mantissa of 2758 is .44059, and the tabular difference is 16 points. In the marginal table headed **16**, in line 3, we find 5, which is .3 of 16.

Ex. 4. Verify each of the following identities:

$\log 92.378 = 1.96557$; $\log 0.034796 = \bar{2}.54153$;
$\log 23.804 = 1.37665$; $\log 0.0030975 = \bar{3}.49101$;
$\log 0.67857 = \bar{1}.83159$; $\log 0.075809 = \bar{2}.87972$.

3. *To find a number when its logarithm is given.*

Keep in mind that the *mantissa* determines the *figures* and their *order* in the expression of a number, while the *characteristic* determines *unit's place.*

Observe that the least and greatest mantissa on each page is written at the bottom of the page.

We have the two following cases.

(*a*) When the given mantissa is in the table.

Ex. 1. Given $\log x = 2.68269$, to find the value of x.

On page 9 we find the mantissa .68269 in row 481 and in column 6; hence .68269 is the mantissa of 4816. Since the characteristic is 2, we have

$$x = 481.6.$$

Similarly if $\log x = \bar{2}.68269$, $x = 0.04816$.

Observe that the first mantissa which is .68 + or .69 + has its first two figures in black type; this is to aid in locating on the page any mantissa which is between .68 and .69.

Ex. 2. Find the value of x in each of the following equations:

$\log x = 3.63889$; $\log x = 1.79803$; $\log x = 1.57933$;
$\log x = 2.97580$; $\log x = \bar{1}.87448$; $\log x = 1.01397$.

For the answers see example 2 in § 2.

(*b*) When the given mantissa is not in the table.

Ex. 3. Given $\log x = 2.28250$, to find the value of x.

On page 3 we find that of tabulated mantissas the next less than .28250 is .28240, which is the mantissa of 1916.

The tabular difference is 22 points.

The given mantissa exceeds the next less mantissa by 10 points.

Hence 1916 should be increased by $\frac{10}{22}$ of 1, or 0.5 approximately.

That is, .28250 is the mantissa of 1916.5 or 19165.

Since the characteristic is 2, we have $x = 191.65$.

Ex. 4. Given $\log x = \bar{1}.03720$, to find x to six places.

When the mantissa is less than .04175, we use pages 20 and 21.

The next less mantissa is .03719, mantissa of 10894.

The tabular difference is 4; hence the correction is $\frac{1}{4}$ of 1, or .3.
Hence $x = 0.108943$.
If only five places were required, interpolation would be unnecessary.

Ex. 5. Given $\log x = -1.23457$, to find x.

Here $\log x$ is not in the *type form*; -1 is not the characteristic nor is $-.23457$ the mantissa. To put $\log x$ in the type form we add 0 in the form $-1+1$; we thus obtain

$$\log x = -2 + (1 - .23457) = \bar{2}.76543, \text{ or } 8.76543 - 10.$$
$$\therefore x = 0.058268.$$

Ex. 6. Find the value of x in each of the following equations:

$$\log x = 1.96557;\ \log x = \bar{1}.83159;\ \log x = \bar{3}.49101;$$
$$\log x = 1.37665;\ \log x = \bar{2}.54153;\ \log x = \bar{2}.87972.$$

For the answers see example 4 in § 2.

Ex. 7. Given $x = 432/5271$, to find x by logarithms.

Here
$$\log x = \log 432 - \log 5271.$$
$$\log 432 = 2.63548 = 12.63548 - 10$$
$$\log 5271 = \underline{3.72189}$$
$$\therefore \log x = 8.91359 - 10$$
$$\therefore x = 0.08196.$$

Observe that before we subtract we write the characteristic 2 in the form $12 - 10$, and thus make the *positive* part of the minuend greater than the *positive* part of the subtrahend.

Ex. 8. Given $x = \sqrt[4]{32.17 \times .00271}$, to find x by logarithms.

Here
$$\log x = (\log 32.17 + \log .00271)/4.$$
$$\log 32.17 = 1.50745$$
$$\log .00271 = \bar{3}.43297$$
$$\therefore \log x = \bar{2}.94042/4$$
$$= (38.94042 - 40)/4$$
$$= 9.73511 - 10, \text{ or } \bar{1}.73511.$$
$$\therefore x = 0.54339.$$

Note that before dividing by 4 we write the characteristic -2 in the form $38 - 40$, so that the negative part, -40, when divided by 4 gives -10 as a quotient.

Table II

4. This table contains the values and logarithms of some important constants and their combinations which most frequently occur. The table needs no explanation.

Table III

5. This table contains the logarithms of the sines, cosines, tangents, and cotangents of angles from 1° to 89° at intervals of 1′.

When the angle is less than 45°, the number of degrees is found at the *top* of the page, the number of minutes in the *left-hand* minute column, and the name of the function at the *top* of the column of mantissas. When the angle is greater than 45°, the number of degrees is found at the *bottom* of the page, the number of minutes in the *right-hand* minute column, and the name of the function at the *bottom* of the column of mantissas.

The mantissa is in the same row as the number of minutes, and the characteristic is at the top or bottom of the column of mantissas.

The characteristic at the top of any column is usually the same as that at the bottom; the only exceptions are found on pages 26 and 45, where the characteristic at the *top* of the column is to be taken with any mantissa *above* the *bar*, and the characteristic at the *bottom* is to be taken with any mantissa *below* the bar.

6. *To find the logarithm of the sine, cosine, tangent, or cotangent of a given angle.*

The following rules for characteristics should be used when applicable.

(*a*) *The characteristic of the sine of an angle between* 6° *and* 90°, *or of the cosine of an angle between* 0° *and* 84°, *is* 9 − 10.

For $\sin 6° = \cos 84° > 0.1$, $\sin 90° = \cos 0° = 1$, and the characteristic of a number between 0.1 and 1 is − 1, or 9 − 10.

(*b*) *The characteristic of the tangent of an angle between* 6° *and* 45°, *or of the cotangent of an angle between* 45° *and* 84°, *is* 9 − 10.

For $\tan 6° = \cot 84° > 0.1$, $\tan 45° = \cot 45° = 1$, and the characteristic of a number between 0.1 and 1 is − 1, or 9 − 10.

(*c*) *The characteristic of the tangent of an angle between* 45° *and* 84°, *or of the cotangent of an angle between* 6° *and* 45°, *is* 0.

For $\tan 45° = \cot 45° = 1$, $\tan 84° = \cot 6° < 10$, and the characteristic of a number between 1 and 10 is 0.

By the rules above what is the characteristic of sin 7°? sin 88°? cos 4°? cos 83°? tan 6°? tan 44°? cot 46°? cot 83°? tan 47°? cot 7°? tan 78°? cot 41°?

Ex. 1. Find log sin 35° 42′, *i.e.*, the logarithm of the sine of 35° 42′.

By (*a*), the characteristic is 9 − 10. On page 41, under 35°, in the mantissa column *headed* "log sin" and in the row 42′ we find the mantissa .76607. Hence log sin 35° 42′ = 9.76607 − 10.

Note. For an explanation of the marginal tabs of Table III, see § 11.

Ex. 2. Verify each of the following identities:

$\log \tan 41° 32' = 9.94732 - 10$; $\log \cos 29° 18' = 9.94055 - 10$;
$\log \sin 68° 21' = 9.96823 - 10$; $\log \cot 28° 35' = 0.26373$;
$\log \tan 88° 35' = 1.60677$; $\log \cos 61° 27' = 9.67936 - 10$

Ex. 3. Find $\log \tan 32° 24' 33''$.

To interpolate for seconds, we assume that any *small increase in an angle is proportional to the corresponding increase or decrease in the logarithm of any function of the angle.*

$$\log \tan 32° 24' = 9.80251 - 10.$$

The tabular difference for 1′, or 60″, is 28 points.

Hence, if an increase of 60″ in the angle causes an increase of 28 points in the mantissa, an increase of 33″ in the angle will cause an increase of 33/60 of 28, or 15, points in the mantissa.

$$\therefore \log \tan 32° 24' 33'' = 9.80266 - 10.$$

Ex. 4. Find $\log \tan 81° 32' 14''$.

$$\log \tan 81° 32' = 0.82723.$$

The tabular difference for 60″ is 87 points.

Hence the *correction* for 14″ is $\frac{14}{60}$ of 87, or 20, points.

$$\therefore \log \tan 81° 32' 14'' = 0.82743.$$

Ex. 5. Find $\log \cos 38° 25' 17''$.

$$\log \cos 38° 25' = 9.89405 - 10.$$

The tabular difference for 60″ is 10 points.

Hence the *correction* for 17″ is $\frac{17}{60}$ of 10, or 3, points.

Since the cosine *decreases* as the angle increases, this correction is to be *subtracted.*

$$\therefore \log \cos 38° 25' 17'' = 9.89402 - 10.$$

Ex. 6. Find $\log \cot 84° 38' 13''$.

$$\log \cot 84° 38' = 8.97285 - 10.$$

Here we take the characteristic at the top of the page, since the mantissa is *above the bar.*

The tabular difference for 60″ is 135 points.

Hence the correction for 13″ is $\frac{13}{60}$ of 135, or 29, points.

$$\therefore \log \cot 84° 38' 13'' = 9.97256 - 10.$$

It must be kept in mind that when the angle *increases* the cosine or the cotangent *decreases;* hence the correction for seconds must be *subtracted* in finding the logarithm of the cosine or cotangent of an angle.

If an angle is less than 2° or greater than 88°, and involves seconds, consult Table IV.

Ex. 7. Verify each of the following identities:

log sin 34° 9′ 17″ = 9.74929 − 10; log sin 61° 56′ 43″ = 9.94571 − 10;
log tan 42° 16′ 41″ = 9.95867 − 10; log tan 78° 19′ 31″ = 0.68481;
log cos 26° 17′ 13″ = 9.95260 − 10; log cos 81° 51′ 35″ = 9.15106 − 10;
log cot 25° 50′ 20″ = 0.31492; log cot 84° 25′ 30″ = 8.98950 − 10.

7. *To find the value of an angle when the logarithm of its sine, cosine, tangent, or cotangent is given.*

Ex. 1. Given log sin A = 9.48213 − 10, to find a value of A.

On page 32, in column *headed* "log sin," under 17°, in row 40′, we find the given mantissa, the given characteristic being at the top of this column.

$$\therefore A = 17° 40'.$$

Observe that when the characteristic of sin A or cos A is -1, a mantissa less than .84949 is in a column *headed* "log sin," while a mantissa greater than .84949 is in a column *footed* "log sin."

When the characteristic of tan A or cot A is -1, the mantissa is in a column *headed* "log tan"; when the characteristic is 0, the mantissa is in a column *footed* "log tan."

When the characteristic of any function is $+1$ or -2, the angle is less than 6° or greater than 84°; hence we consult one of the first three pages of the table.

Ex. 2. Find the value of A in each of the following equations:

log sin A = 9.96823 − 10; log tan A = 9.94732 − 10;
log cos A = 9.94055 − 10; log cot A = 0.26373.

For the answers see example 2 in § 6.

Ex. 3. Given log sin A = 9.93422 − 10, to find the value of A.

The given mantissa is not found in the table.
The next less mantissa is .93420, mantissa of sin 59° 15′.
The tabular difference for 60″ is 7 points.
The given mantissa exceeds the next less by 2 points.
Hence the correction is $\frac{2}{7}$ of 60″, or 17″.

$$\therefore A = 59° 15' 17''.$$

Ex. 4. Given log tan A = 0.46940, to find the value of A.

The next less mantissa is .46922, mantissa of tan 71° 15′.
The tabular difference for 60″ is 41 points.
The given mantissa exceeds the next less by 18 points.
Hence the correction is $\frac{18}{41}$ of 60″, or 26″.

$$\therefore A = 71° 15' 26''.$$

Ex. 5. Given log cos A = 9.56871 − 10, to find the value of A.

The next less mantissa is .56854, mantissa of cos 68° 16′.
The tabular difference for 60″ is 32 points.

The given mantissa exceeds the next less by 17 points.
Hence the correction is $\frac{17}{32}$ of 60″, or 32″.
Since the angle decreases when the cosine increases, we subtract this correction from 68° 16′ and obtain

$$A = 68° 15′ 28″.$$

Ex. 6. Find the value of A in each of the following equations:

$\log \sin A = 9.74929 - 10$;	$\log \sin A = 9.94571 - 10$;
$\log \tan A = 9.95867 - 10$;	$\log \tan A = 0.68481$;
$\log \cos A = 9.95260 - 10$;	$\log \cos A = 9.15106 - 10$;
$\log \cot A = 0.31492$;	$\log \cot A = 8.98950 - 10$.

For the answers see example 7 in § 6.

Table IV

8. The first page of this table contains the logarithms of the sines of angles from 0° to 0° 3′ at intervals of 1″, or the logarithms of cosines of angles from 89° 57′ to 90°. Since within the limits of 0° and 3′, to five places of decimals, $\log \tan A = \log \sin A$, and within the limits of 89° 57′ and 90° $\log \cot A = \log \cos A$, any log sin on this page can be taken as log tan, and any log cos as log cot.

E.g., $\log \tan 0° 1′ 52″ = \log \sin 0° 1′ 52″ = 6.73479 - 10$;
and $\log \cot 89° 58′ 37″ = \log \cos 89° 58′ 37″ = 6.60465 - 10$.

The other pages of this table contain the logarithms of the sines, cosines, and tangents of angles from 3′ to 2° at intervals of 10″; also the logarithms of the sines, cosines, and cotangents of angles from 88° to 89° 57′ at intervals of 10″.

For the explanation of the marginal tabs see § 12.

Ex. Find $\log \sin 0° 50′ 25″$.
$\log \sin 0° 50′ 20″ = 8.16557 - 10$.
The tabular difference for 10″ is 143 points.
Hence the correction for 5″ is $\frac{5}{10}$ of 143, or 72, points.
$\therefore \log \sin 0° 50′ 25″ = 8.16629 - 10$.
Similarly $\log \cos 1° 48′ 35″ = 9.99978 - 10$.
Also $\log \tan 0° 46′ 32″ = 8.13152 - 10$. $\log \cot 88° 32′ 43″ = 8.40475 - 10$.

Any logarithmic tangent or cotangent found in this table is negative. Hence when $\log \tan A$ or $\log \cot A$ is positive, we use the relation $\log \cot A = -\log \tan A$ before consulting the table.

E.g., $\log \cot 0° 2′ 15″ = 0 - \log \tan 0° 2′ 15″$
$= (10 - 10) - (6.81591 - 10) = 3.18409$.
Again, if $\log \tan A = 2.35063$,
$\log \cot A = 10 - 2.35063 - 10 = 7.64937 - 10$.
$\therefore A = 89° 44′ 40″$.

Table V

9. This four-place table contains the natural sines, cosines, tangents, and cotangents of angles from 0° to 90° at intervals of 1′.

For the explanation of the marginal tabs see § 13.

Ex. 1. Verify each of the following identities:

$\sin 27° 42′ = 0.4648$; $\tan 72° 21′ = 3.1429$; $\sin 22° 3′ 22″ = 0.3755$;
$\cos 68° 43′ = 0.3630$; $\cot 82° 28′ = 0.1322$; $\tan 60° 4′ 38″ = 1.7375$.

Ex. 2. Find the value of A in each of the following equations:

$\sin A = 0.4648$; $\tan A = 3.1429$; $\sin A = 0.3755$;
$\cos A = 0.3630$; $\cot A = 0.1322$; $\tan A = 1.7375$.

Ex. 3. The bearing of a course is N. 25° 42′ E., and its length is 9.32 chains; find its latitude and departure to two decimal places.

$$\text{Latitude} = 9.32 \sin 25° 42′ = 9.32 \times 0.434 = 4.04 \text{ chains.}$$
$$\text{Departure} = 9.32 \cos 25° 42′ = 9.32 \times 0.901 = 8.40 \text{ chains.}$$

Explanation of Marginal Tabs

10. Table I. The pupil should place his book of tables on his desk at his left, and in manipulating them use only his *left* hand. If he opens the tables with the projecting tab B, all the marginal tabs of Table I can be seen in the left-hand margin. Using the projecting tab A, he puts his forefinger under the first pages of the table, and placing his thumb on any marginal tab, as tab 5, he turns to the right the leaves not held between his thumb and finger, thus opening the table at the pages marked by the marginal tab 5. When thus opened it is found that the first figure on the marginal tab used is the first figure of every number found on the pages opened, that the mantissa on this tab is the least mantissa on these pages, and that the greatest mantissa on these pages is a little greater than the mantissa on the next tab *below*.

Hence, to find the pages needed when the number is given, *use the tab which has on it the first figure of the given number.*

To find the pages needed when the logarithm is given, *use the tab which has on it the mantissa next less than the given one.*

11. Table III. Open the book of tables with tab C, so that all the marginal tabs of Table III can be seen in the left-hand margin. Opening this table with any marginal tab, as tab 17° – 20°, we find that the number of degrees at the top of this tab are those at the tops of the pages opened, and that the numbers of degrees at the

bottom of this tab are those at the bottoms of these pages. The first mantissa on this tab is the least mantissa on these pages, in the columns *headed* "log sin," and the greatest mantissa in these columns is the first mantissa on the next tab *below*. The *second* mantissa on this tab is the least mantissa on these pages, in the columns *headed* "log tan," and the greatest mantissa in these columns is the *second* mantissa on the next tab *below*.

The *last* mantissa on this tab is the least mantissa on these pages, in the columns *footed* "log sin," and the greatest mantissa in these columns is the *last* mantissa on the next tab *above*.

The mantissa *next to the last* is the least mantissa on these pages in the columns *footed* "log tan," and the greatest mantissa in these columns is the corresponding mantissa on the next tab *above*. Hence:

To find the pages needed when the angle is given, *use the tab on which the number of degrees is written or included.*

To find the pages needed when log sin or log cos is given, and the characteristic is $9 - 10$, *use the tab whose first or last mantissa is the next less than the given one.*

To find the pages needed when log tan or log cot is given:

When the characteristic is $9 - 10$, *use the tab whose second mantissa is the next less than the given one.*

When the characteristic is 0, *use the tab whose mantissa next to the last is the next less than the given one.*

When the characteristic of any function is -2 or $+1$, look for the logarithm on one of the first three pages of the table.

On tab 41°–44° observe that the *last* mantissa is the greatest in the columns *headed* "log sin," as well as the least in the columns *footed* "log sin"; and that the mantissa next to the last is the greatest logarithm in the columns *headed* "log tan," as well as the least in the columns *footed* "log tan."

Where no characteristic is written before a mantissa on any tab, $\bar{1}$ is understood with the first, second, or fourth mantissa, and 0 with the third.

12. Table IV. To open the tables, use the projecting tab D. The first, the second, and the last logarithm on any marginal tab have the same meaning and use respectively as the first, the second, and the last logarithm on a tab in Table III.

Since the logarithmic tangents of angles between 88° and 90° are not recorded in this table, its tabs have no logarithm corresponding to the third logarithm on a tab in Table III.

13. TABLE V. To open the tables, use the projecting tab E.

To find the pages needed when the angle is given, use the marginal tab on which the name of the required function is written and the given number of degrees is written or included.

To find the pages needed when a function is given, use a tab on which the name of the given function is written and on which the first or the last function is the next less than the given one.

If this next less function is the *first* on the tab, the given function will be found in a column *headed* "sin" or "tan"; if it is the *last* on the tab, the given function will be found in a column *footed* "sin" or "tan."

14. TABLE VI. This table is to be used when greater accuracy is required than can be secured by interpolation in Table IV.

In it α = the *number* of seconds in an angle less than $2° 2'$,

$$S = \log(\sin \alpha''/\alpha) = \log \sin \alpha'' - \log \alpha, \quad (1)$$

$$T = \log(\tan \alpha''/\alpha) = \log \tan \alpha'' - \log \alpha. \quad (2)$$

From (1), $\log \sin \alpha''$ can be obtained from S and α, or α can be found from S and $\log \sin \alpha''$. From (2), $\log \tan \alpha''$ can be obtained from T and α, or α can be found from T and $\log \tan \alpha''$.

Ex. 1. Find $\log \sin 0° 42' 13''$.

$0° 42' 13'' = 2533'' = \alpha''$.

$\therefore \log \alpha = 3.40364$

$S = \underline{4.68556 - 10}$

$\therefore \log \sin \alpha'' = 8.08920 - 10$

Ex. 2. Find $\log \cos 88° 18' 21.2''$.

$\cos 88° 18' 21.2'' = \sin 1° 41' 38.8''$.

$1° 41' 38.8'' = 6098.8'' = \alpha''$.

$\therefore \log \alpha = 3.78525$

$S = \underline{4.68551 - 10}$

$\therefore \log \cos 88° 18' 21.2'' = 8.47076 - 10$

Ex. 3. Find $\log \tan 0° 58' 32.7''$.

$0° 58' 32.7'' = 3512.7'' = \alpha''$.

$\log \alpha = 3.54564$

$T = \underline{4.68562 - 10}$

$\therefore \log \tan \alpha'' = 8.23126 - 10$

Ex. 4. Find $\log \tan 89° 13' 34.22''$.

$\cot 89° 13' 34.22'' = \tan 46' 25.78''$.

$46' 25.78'' = 2785.78'' = \alpha''$.

$\therefore \log \alpha = 3.44495$

$T = \underline{4.68560 - 10}$

$\therefore \log \cot 89° 13' 34.22'' = 8.13055 - 10$

$\therefore \log \tan 89° 13' 34.22'' = 1.86945$.

Find A when there is given:

Ex. 5. $\log \sin A = 6.67237 - 10$.

Here $A < 2°$; hence we put

$\log \sin \alpha'' = 6.67237 - 10$

$S = \underline{4.68557 - 10}$

$\therefore \log \alpha = 1.98680$

$\therefore \alpha'' = 97.006''$

$= 1' 37.006''$.

Ex. 6. $\log \tan A = 2.35427$.

Let $\log \tan \alpha'' = \log \cot A$; then

$\log \tan \alpha'' = 7.64573 - 10$

$T = \underline{4.68558 - 10}$

$\therefore \log \alpha = 2.96015$

$\therefore \alpha'' = 912.32'' = 15' 12.32''$.

$\therefore A = 90° - \alpha'' = 89° 44' 47.68''$.

TABLE II

IMPORTANT CONSTANTS AND THEIR COMMON LOGARITHMS

		Common Logarithms
The circumference of a circle	= 360°	2. 55 630 250
	= 21 600′	4. 33 445 375
	= 1 296 000″	6. 11 260 500
π = 3. 14 159 265 358 979 323 846 264 338 328		0. 49 714 987
π^2	= 9. 86 960 440	0. 99 429 975
$1/\pi$	= 0. 31 830 989	$\bar{1}$. 50 285 013
$1/\pi^2$	= 0. 10 132 118	$\bar{1}$. 00 570 025
$\sqrt{\pi}$	= 1. 77 245 385	0. 24 857 494
$1/\sqrt{\pi}$	= 0. 56 418 958	$\bar{1}$. 75 142 506
$\sqrt{(3/\pi)}$	= 0. 97 720 502	$\bar{1}$. 98 998 569
$\sqrt{(4/\pi)}$	= 1. 12 837 917	0. 05 245 506
$\sqrt[3]{\pi}$	= 1. 46 459 189	0. 16 571 662
$1/\sqrt[3]{\pi}$	= 0. 68 278 406	$\bar{1}$. 83 428 338
1 radian = $180°/\pi$	= 57. 29 577 951°	1. 75 812 263
	= 3 437. 74 677′	3. 53 627 388
	= 206 264. 806″	5. 31 442 513
In terms of a radian	1° = 0. 01 745 329	$\bar{2}$. 24 187 737
	1′ = 0. 00 029 089	$\bar{4}$. 46 372 612
	1″ = 0. 00 000 485	$\bar{6}$. 68 557 487
Base of natural logarithms = ϵ	= 2. 71 828 183	0. 43 429 448
Modulus of common logarithms = $\log_{10}\epsilon$	= 0. 43 429 448	$\bar{1}$. 63 778 431
Factor by which to multiply common logs, to obtain natural logs, or $1/\log_{10}\epsilon$	= 2. 30 258 5	0. 36 221 57
1 meter	= 39.37 inches	1. 59 516 54
	= 1.09 361 1 yard	0. 03 886 29
	= 3.28 083 3 feet	0. 51 598 42
1 kilometer	= 0.62 137 0 mile	$\bar{1}$. 79 335 03
1 mile	= 1.60 934 7 kilom.	0. 20 664 97
1 yard	= 0.91 440 2 metre	$\bar{1}$. 96 113 71
1 foot	= 0.30 480 1 metre	$\bar{1}$. 48 401 58
1 inch	= 25.40 005 mm.	1. 40 483 46
1 pound Av.	= 7000 grains	3. 84 509 80
	= 453.59 242 77 grammes	2. 65 666 58
1 ounce Av.	= 28.34 953 grammes	1. 45 254 59
1 ounce Troy	= 31.10 348 grammes	1. 49 280 91
1 grain	= 0.06 479 892 gramme	$\bar{2}$. 81 156 78
1 kilogramme	= 2.20 462 2 pounds Av.	0. 34 333 42
1 gramme	= 15.43 235 639 grains	1. 18 843 22
1 litre	= 1.05 668 U. S. quart	0. 02 394 4
	= 0.26 417 U. S. gallon	$\bar{1}$. 42 188 4
	= 33.814 U. S. fluid oz.	1. 52 910
1 quart, U. S.	= 0.94 636 litre	$\bar{1}$. 97 605 6
1 gallon, U. S.	= 3.78 544 litres	0. 57 811 6
1 fluid ounce	= 0.02 957 3 litre	$\bar{2}$. 47 090
1 gallon U. S.	= 231 cu. inches	2. 36 361 20
1 British gallon	= 4.54 346 litres	0. 65 738 67
1 British bushel	= 36.34 77 litres	1. 56 047 69

TABLE IV

THE LOGARITHMS

OF THE

TRIGONOMETRIC FUNCTIONS OF ANGLES

From 0′ to 3′ and 89° 57′ to 90°, for every second
From 3′ to 2° and 88° to 89° 57′, for every ten seconds

0′–20′
$\bar{6}.68\ 55$
$\bar{6}.68\ 55$
$\bar{1}.99\ 99$
89° 40′
–90°

$\log \cos A = 0.00\ 000$, when $0' < A < 16'$
$\log \sin A = 0.00\ 000$, when $89° 44' < A < 90°$
$\log \tan A + \log \cot A \equiv 0$

TABLE VI

THE LOGARITHMS S AND T

The angle α'' being less than 7275″

FORMULAS FOR THE USE OF S AND T

When the angle A is less than 2°,

let α = the number of seconds in the angle A;

then $S = \log \sin \alpha'' - \log \alpha$,

$T = \log \tan \alpha'' - \log \alpha$,

$\log \cot \alpha'' = -\log \tan \alpha''$.

When the angle A is between 88° and 90°,

let α'' = the number of seconds in the angle $90° - A$;

then $\log \cos A = \log \alpha + S$,

$\log \cot A = \log \alpha + T$,

$\log \tan A = -\log \tan \alpha''$.

The angle $A < 2°$ or $> 88°$,

when $\log \sin A$ or $\log \cos A < \bar{2}.54282$ or $> \bar{1}.99974$,

or when $\log \tan A$ or $\log \cot A < \bar{2}.54308$ or > 1.45692.

ANNOUNCEMENTS

TEXTBOOKS IN MATHEMATICS

FOR COLLEGES AND UNIVERSITIES

Anderegg and Roe: Trigonometry (Revised Edition)
Bailey and Woods: Plane and Solid Analytic Geometry
Barker: Computing Tables and Mathematical Formulas
Byerly: Elements of the Integral Calculus (Revised)
Byerly: Fourier's Series
Byerly: Generalized Coördinates
Clements: Problems in the Mathematical Theory of Investment
Comstock: Method of Least Squares
Durfee: Elements of Plane Trigonometry
Eisenhart: Differential Geometry of Curves and Surfaces
Faunce: Descriptive Geometry
Fine: College Algebra
Glenn: The Theory of Invariants
Granville: Plane and Spherical Trigonometry and Tables
Granville and Smith: Differential and Integral Calculus
Hall: Mensuration
Halsted: Metrical Geometry
Hancock: Theory of Maxima and Minima
Hawkes: Higher Algebra
Hedrick: Goursat's Mathematical Analysis, Vol. I
Volume II, Part I. Functions of a Complex Variable
Volume II, Part II. Differential Equations
Hedrick and Kellogg: Applications of the Calculus to Mechanics
Hooper and Wells: Electrical Problems
Ingersoll and Zobel: Mathematical Theory of Heat Conduction
Lehmer: Synthetic Projective Geometry
Leib: Problems in the Calculus
Lester: Integrals of Mechanics
Longley: Tables and Formulas (Revised Edition)
McClenon and Rusk: Elementary Functions
Manning: Non-Euclidean Geometry
Maurus: An Elementary Course in Differential Equations
Osborne: Examples of Differential Equations

TEXTBOOKS IN MATHEMATICS

FOR COLLEGES AND UNIVERSITIES

Continued

Peirce, B. O.: Short Table of Integrals (Revised)
Peirce, B. O.: The Newtonian Potential Function
Pierpont: Functions of a Complex Variable
Pierpont: Functions of Real Variables, Volume I
Volume II
Randall: Elements of Descriptive Geometry
Randall: Shades and Shadows, and Perspective
Richardson: Solid Geometry
Shepard: Problems in the Strength of Materials
Skinner: Mathematical Theory of Investment
Slocum: Resistance of Materials
Slocum and Hancock: Strength of Materials
Smith and Gale: Elements of Analytic Geometry
Smith and Gale: Introduction to Analytic Geometry
Smith and Gale: New Analytic Geometry
Smith and Granville: Elementary Analysis
Smith and Longley: Theoretical Mechanics
Taylor: Elements of the Calculus (Revised and Enlarged)
Taylor: Logarithmic and Trigonometric Tables
Taylor and Puryear: Plane and Spherical Trigonometry
Veblen and Young: Projective Geometry, Volume I
Volume II
Wentworth: College Algebra (Revised Edition)
Wentworth: Trigonometries (Second Revised Edition)
(*For list see Descriptive Catalogue*)
Wentworth and Smith: Plane and Spherical Trigonometries
(*For list see Descriptive Catalogue*)
Wentworth and Smith: Solid Geometry
Wilson: Advanced Calculus
Woods and Bailey: A Course in Mathematics, Volume I
Volume II
Woods and Bailey: Analytic Geometry and Calculus

GINN AND COMPANY PUBLISHERS

BOOKS OF CONVENIENCE FOR MATHEMATICIANS

TABLES AND FORMULAS. For solving Numerical Problems in Analytic Geometry, Calculus, and Applied Mathematics

Compiled by WILLIAM RAYMOND LONGLEY, Assistant Professor of Mathematics, Sheffield Scientific School, Yale University.

THE use of this book promotes economy of time and effort. All necessary tables and formulas are included, but there is no extended cumbersome material.

COMPUTING TABLES AND MATHEMATICAL FORMULAS

Compiled by E. H. BARKER, former Head of the Mathematics Department, Polytechnic High School, Los Angeles, Cal. Narrow 12mo, semiflexible cloth, 88 pages.

STUDENTS of mathematics, draftsmen, and engineers will find all the material required easily accessible in this handy pocket manual.

NOTEBOOKS FOR COLLEGE CLASSES

By ROBERT E. MORITZ, Professor and Head of the Department of Mathematics in the University of Washington

COLLEGE MATHEMATICS NOTEBOOK

THIS notebook, of great value to students of mathematics, physics, astronomy, and chemistry, contains lists of important formulas from algebra, geometry, trigonometry, and analytics, one hundred sheets of coördinate paper, seven two-place tables, and eight sets of standard graphs.

COLLEGE ENGINEERING NOTEBOOK

A TIME-SAVING notebook for students in civil, mechanical, and electrical engineering, containing lists of important formulas, tables, and sets of type curves. There are ninety sheets of rectangular coördinate paper and five sheets each of polar-coördinate and logarithmic-coördinate paper.

GINN AND COMPANY PUBLISHERS

BOOKS IN HIGHER MATHEMATICS

HIGHER ALGEBRA

By Herbert E. Hawkes, Columbia University

A thorough development of college algebra that will be found especially adapted for use in technical schools. The reasonable use of graphical methods, care in finding the limit of error in numerical computations, and the use of tables in extracting roots are all features in accord with modern instruction in applied mathematics.

THEORY OF FUNCTIONS OF REAL VARIABLES

By James Pierpont, Yale University. Vol. I, Vol. II

"A most admirable exposition of what in modern times have come to be regarded as the unshakable foundations of analysis. Hitherto, in order to gain a knowledge of the best that has been done in the subject, it has been necessary to repair to foreign institutions; now it is no longer necessary to have recourse to foreign tongues, thanks to Professor Pierpont's simple and scholarly presentation." — *The Nation.*

FUNCTIONS OF A COMPLEX VARIABLE

By James Pierpont, Yale University

Adapted to the needs both of students of applied mathematics and of those specializing in pure mathematics. The elliptic functions and linear homogeneous differential equations of order two are treated, and the functions of Legendre, Laplace, Bessel, and Lamé are studied in some detail.

MATHEMATICAL THEORY OF INVESTMENT

By Ernest Brown Skinner, University of Wisconsin

The mathematical material that will prove most useful to the modern educated business man. The book treats the theory of interest, both simple and compound, the theory of bond values, depreciation, sinking funds, the amortization of debts by various plans, inheritance taxes, old-age pensions, and life insurance.

MATHEMATICAL THEORY OF HEAT CONDUCTION

By L. R. Ingersoll, University of Wisconsin, and O. J. Zobel

A text in Fourier's Series and Heat Conduction, presenting along with the theory a large number of practical applications of special value to geologists and engineers. These include problems in the tempering of steels, freezing of concrete, electric and thermit welding, and similar questions. The book presents an excellent first course in mathematical physics.
